Pmod I2S (Pmod I2S2)
Stereo Audio Amplifier

Pmod Connectors (1/2)

Basys3 provides 4 Pmod connectors for users

- Basys3 provides 4 Pmod connectors for users

Basys3: Pmod Pin-Out Diagram

Pmod Connectors (2/2)

- Each 12-pin Pmod connector provides
 - **Two** 3.3V VCC signals (pins 6 and 12)
 - **Two** Ground signals (pins 5 and 11)
 - **Eight** logic signals

Speaker

- Control the DAC (digital to analog converter) CS4344

Audio Controller

We should design a controller
for audio data control
(to generate SDIN, LRCK, MCLK, SCK)

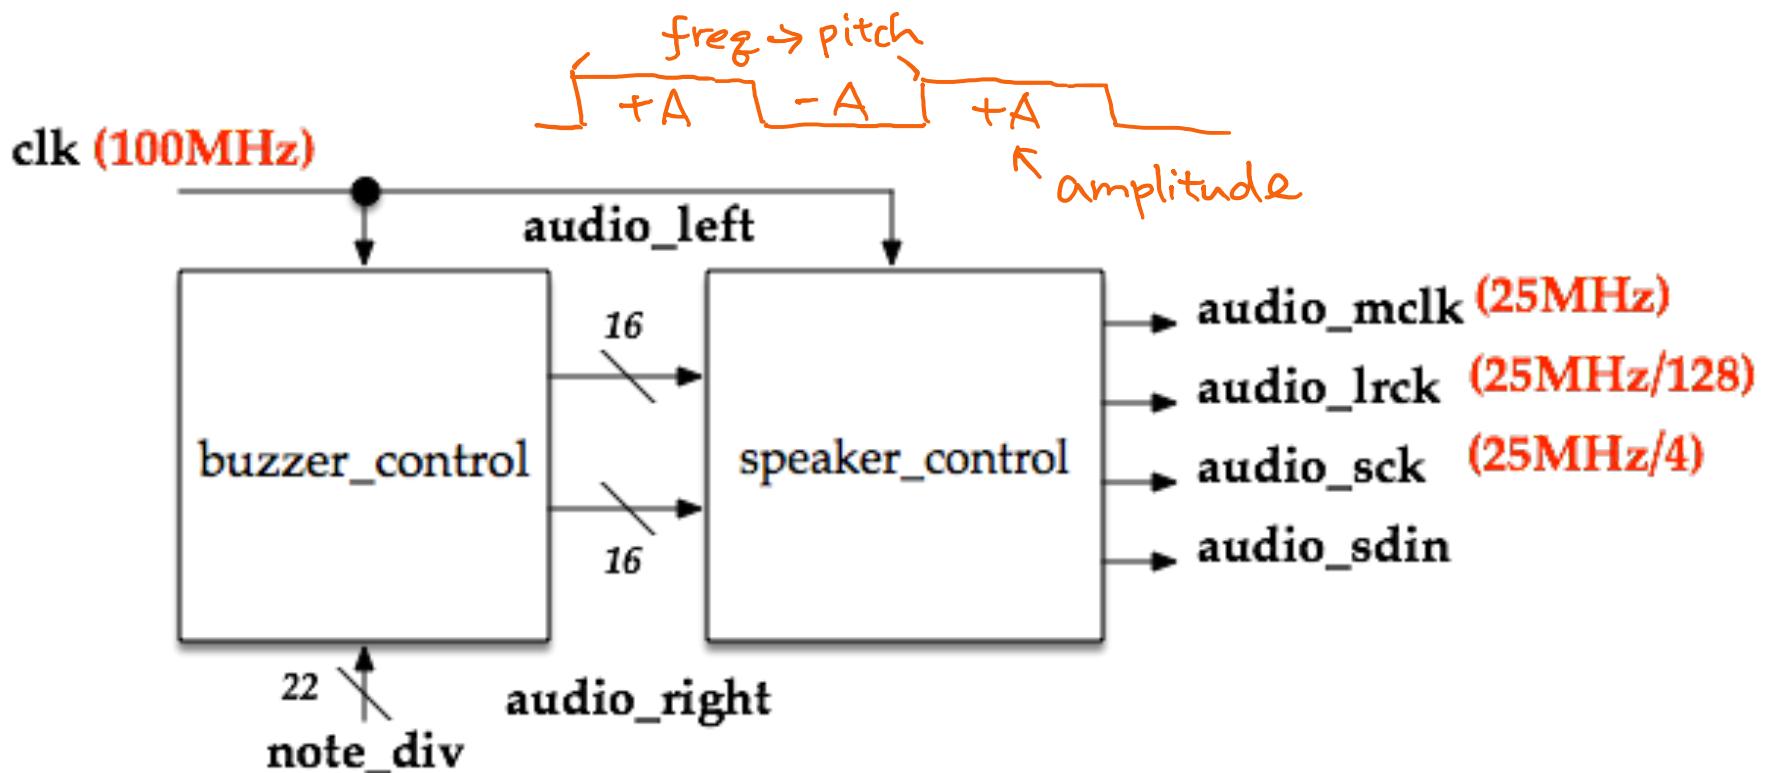

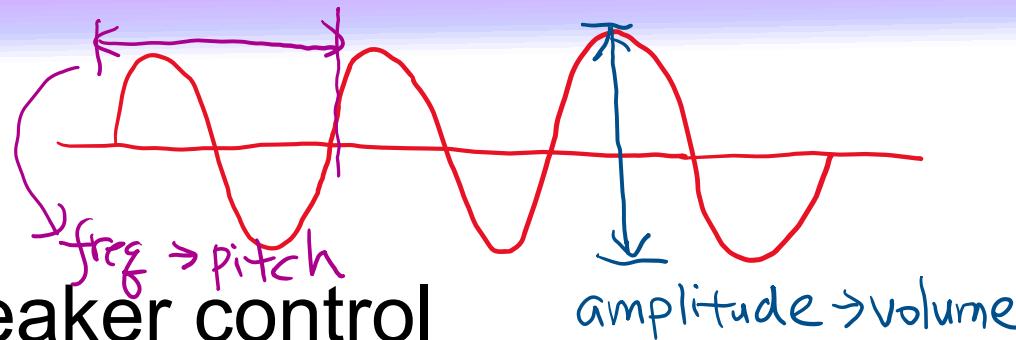

Preset Parameters

- Control the DAC (digital to analog converter) CS4344
 - LRCK (Left-Right Clock, or Word Select (WS) Clock, or Sample Rate (Fs) Clock) controls the sequence (left or right) of the serial stereo output
 - 25MHz/128 (~192kHz)
 - MCLK (Master Clock) synchronizes the audio data transmission
 - 25MHz (~24.5760MHz)
 - MCLK/LRCK must be an integer ratio
 - 128
 - Serial Clock (SCK) controls the shifting of data into the input data buffers (32^*Fs)
 - $25\text{MHz}/128^*32 = 25\text{MHz}/4$

LRCK (kHz)	MCLK (MHz)									
	64x	96x	128x	192x	256x	384x	512x	768x	1024x	1152x
32	-	-	-	-	8.1920	12.2880	-	-	32.7680	36.8640
44.1	-	-	-	-	11.2896	16.9344	22.5792	33.8680	45.1580	-
48	-	-	-	-	12.2880	18.4320	24.5760	36.8640	49.1520	-
64	-	-	8.1920	12.2880	-	-	32.7680	49.1520	-	-
88.2	-	-	11.2896	16.9344	22.5792	33.8680	-	-	-	-

Mode	QSM				DSM			SSM		

Audio Controller

- Buzzer control + speaker control

Buzzer Control

- The buzzer frequency is obtained by dividing crystal frequency 100MHz by N
 - ◆ E.g., $\text{cnt_max} = 100_\underline{000}_\underline{000} / N$
- The buzzer clock (b_{clk}) is periodically inverted for every $N/2$ clock cycles
 - ◆ ***To determine the sound frequency***
- Example for music notes
 - ◆ Mid Do: 261 Hz
 - ◆ Mid Re: 293 Hz
 - ◆ Mid Mi: 330 Hz

Ex: Do $\rightarrow 261 \text{ Hz}$

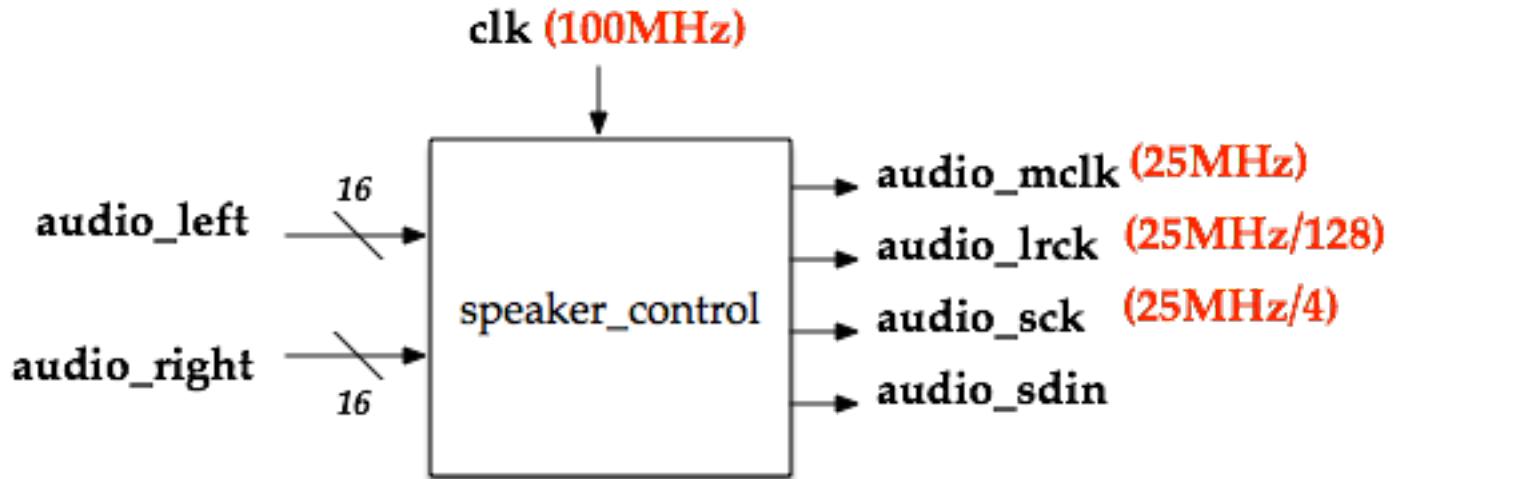

$$100,000,000 / 261 = N$$

$$N = 383,142$$

$$N/2 = 191,571$$

Speaker Control

- Inputs (stereo audio ***parallel input***)
 - ◆ Two 16-bit channels: `audio_left` [15:0], `audio_right`[15:0]
 - ◆ Value: $16^{\prime}h8000$ (min) < V < $16^{\prime}h7FFF$ (max)
 - Volume of output sound in 16-bit two's complement
 - Keep $|V_{max}| \approx |V_{min}|$
- Outputs (stereo audio ***serial output***)
 - ◆ `audio_mclk` = 25MHz (divided by 4 from external 100MHz clock source)
 - ◆ `audio_lrck` = 25MHz/128 (clock rate of parallel audio input)
 - ◆ `audio_sck` = 25MHz/4 (clock rate of serial audio output)
 - ◆ `audio_sdin` (1 bit serial audio data output)

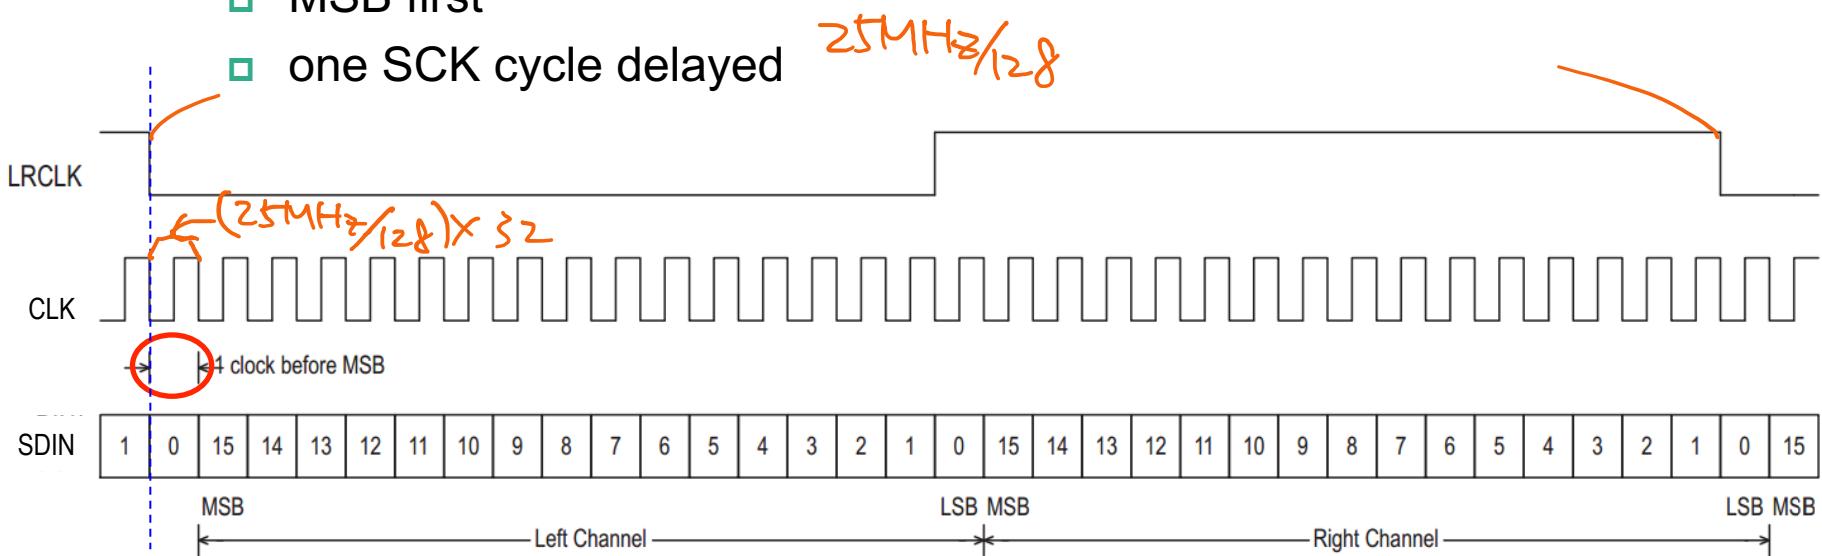

Speaker Control

- Frequency dividers

- audio_mclk
- audio_lrck
- audio_sck

- Parallel to serial module

- To re-formulate the audio sequence
 - Left first, then right
 - MSB first
 - one SCK cycle delayed

Buzzer Control

```
module buzzer_control(
    clk, // clock from crystal
    rst, // active high reset
    note_div, // div for note generation
    audio_left, // left sound audio
    audio_right // right sound audio
);

// I/O declaration
input clk; // clock from crystal
input rst; // active high reset
input [21:0] note_div; // div for note generation
output [15:0] audio_left; // left sound audio
output [15:0] audio_right; // right sound audio

// Declare internal signals
reg [21:0] clk_cnt_next, clk_cnt;
reg b_clk, b_clk_next;
```

```
// Note frequency generation
always @(posedge clk or posedge rst)
    if (rst == 1'b1) begin
        clk_cnt <= 22'd0;
        b_clk <= 1'b0;
    end else begin
        clk_cnt <= clk_cnt_next;
        b_clk <= b_clk_next;
    end
always @*
    if (clk_cnt == note_div) begin
        clk_cnt_next = 22'd0;
        b_clk_next = ~b_clk;
    end else begin
        clk_cnt_next = clk_cnt + 1'b1;
        b_clk_next = b_clk;
    end
// Assign the amplitude of the note
assign audio_left = -213 → h0000
    (b_clk == 1'b0) ? 16'hC000 : 16'h4000;
assign audio_right =
    (b_clk == 1'b0) ? 16'hC000 : 16'h4000;
endmodule
```

$\nearrow 191,571$

Ex: $\begin{cases} -2^{13} \rightarrow h0000 \\ +2^{13} \rightarrow h2000 \end{cases}$

-2^{14} 2^{14}

Speaker Control (1/2)

```
module speaker_control(
    clk, // clock from the crystal
    rst, // active high reset
    audio_in_left, // left audio data input
    audio_in_right, // right channel audio input
    audio_mclk, // master clock
    audio_lrck, // left-right clock, Word Select
                 // clock, or sample rate clock
    audio_sck, // serial clock
    audio_sdin // serial audio data input
);

// I/O declaration
input clk; // clock from the crystal
input rst; // active high reset
input [15:0] audio_in_left; // left audio input
input [15:0] audio_in_right; // right audio input
output audio_mclk; // master clock
output audio_lrck; // left-right clock
output audio_sck; // serial clock
output audio_sdin; // serial audio data input
reg audio_sdin;
```

```
// Declare internal signal nodes
wire [8:0] clk_cnt_next;
reg [8:0] clk_cnt;
reg [15:0] audio_left, audio_right;

// Counter for the clock divider
assign clk_cnt_next = clk_cnt + 1'b1;

always @(posedge clk or posedge rst)
    if (rst == 1'b1)
        clk_cnt <= 9'd0;
    else
        clk_cnt <= clk_cnt_next;

// Assign divided clock output
assign audio_mclk = clk_cnt[1];
assign audio_lrck = clk_cnt[8];

$$\text{CLK}_4 = 25\text{MHz}$$

$$\text{CLK}_{512} = 25\text{MHz}/128$$

// use internal serial clock mode
assign audio_sck = 1'b1;
```

Speaker Control (2/2)

```
// audio input data buffer
always @(posedge clk_cnt[8] or posedge rst)
  if (rst == 1'b1) begin
    audio_left <= 16'd0;
    audio_right <= 16'd0;
  end else begin
    audio_left <= audio_in_left;
    audio_right <= audio_in_right;
  end
  always @*
    case (clk_cnt[8:4])
      5'b00000: audio_sdin = audio_right[0];
      5'b00001: audio_sdin = audio_left[15];

default: audio_sdin = 1'b0;
endcase
endmodule
```

Top Model of Audio Controller: speaker.v

```
module speaker(
    clk, // clock from crystal
    rst, // active high reset
    audio_mclk, // master clock
    audio_lrck, // left-right clock
    audio_sck, // serial clock
    audio_sdin // serial audio data input
);

// I/O declaration
input clk; // clock from the crystal
input rst; // active high reset
output audio_mclk; // master clock
output audio_lrck; // left-right clock
output audio_sck; // serial clock
output audio_sdin; // serial audio data input
// Declare internal nodes
wire [15:0] audio_in_left, audio_in_right;

// Note generation
buzzer_control Umg(
    .clk(clk), // clock from crystal
    .rst(rst), // active high reset
    .note_div(22'd191571), // div for note generation
    .audio_left(audio_in_left), // left sound audio
    .audio_right(audio_in_right) // right sound audio
);
```

```
// Speaker controller
speaker_control Usc(
    .clk(clk), // clock from the crystal
    .rst(rst), // active high reset
    .audio_in_left(audio_in_left), // left channel
    .audio_in_right(audio_in_right), // right channel
    .audio_mclk(audio_mclk), // master clock
    .audio_lrck(audio_lrck), // left-right clock
    .audio_sck(audio_sck), // serial clock
    .audio_sdin(audio_sdin) // serial audio data input
);
endmodule
```

音組三甲

Basic Concepts of Sound

- **Sound** that is perceptible by **humans** has frequencies from about **20 Hz** to **20,000 Hz**
- **Frequency:**
 - ◆ The **higher** frequency, the **higher** pitch
 - ◆ The **lower** frequency, the **lower** pitch
- **Duty Cycle:**
 - ◆ The **evener** duty cycle, the **better** quality
 - ◆ ~50%

音高 (pitch)

八度音高 \leftrightarrow 頻率有兩倍的關係

一次搞懂「泛音列」！<https://youtu.be/0iJmDhNocaQ>

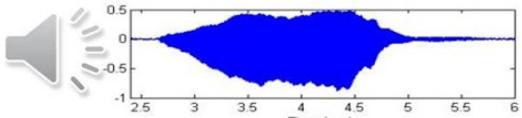

為甚麼可以辨別出鋼琴、提琴、鐵琴的聲音？

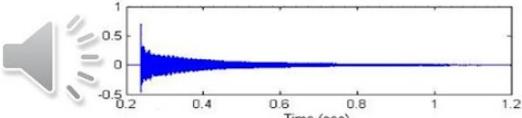

鋼琴

提琴

鐵琴

• 聲音的三大特徵：

- 音調(pitch)

- 聲音的頻率

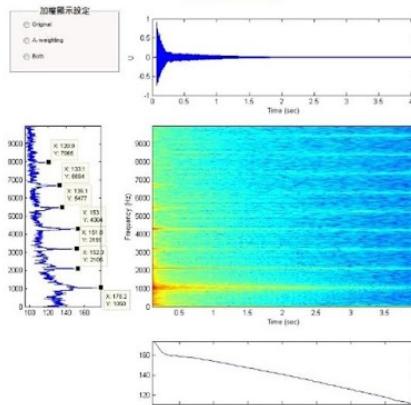

- 韻度(loudness)

- 聲音的大小

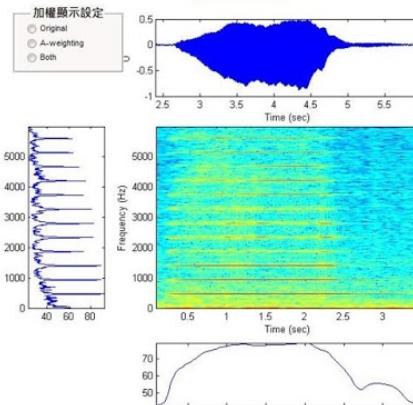

- 音色(timbre)

- 聲音的頻率組成

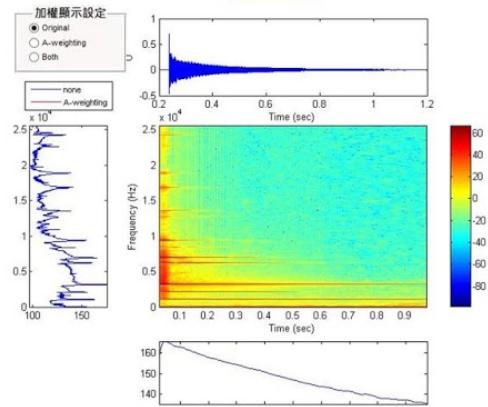

鋼琴

提琴

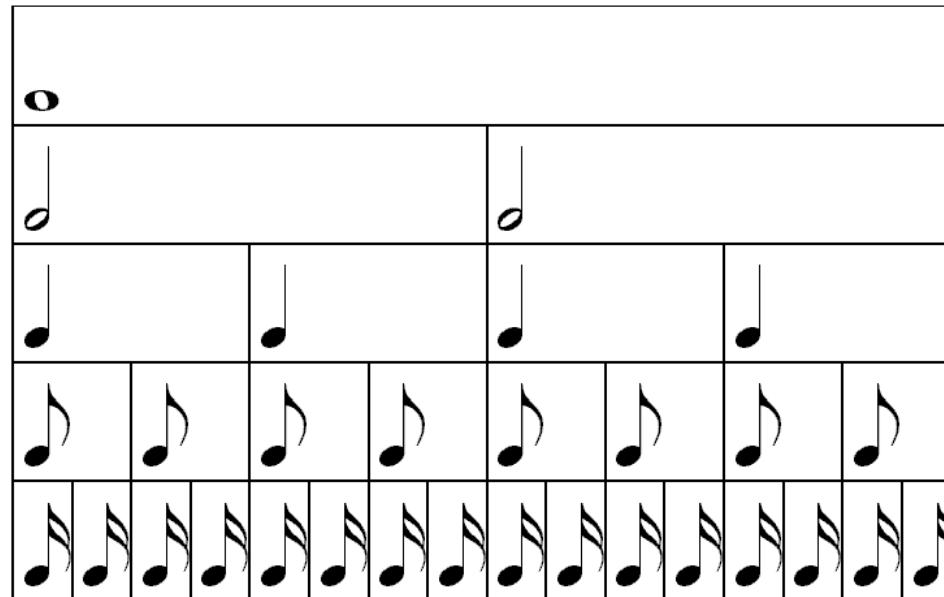

鐵琴

You may write an aid program to generate the table...

- So that you can copy-n-paste music notes

A screenshot of a Windows command-line window titled "C:\Program Files\dotnet\dotnet.exe". The window contains a list of 39 lines of code, each consisting of two parts separated by a colon. The first part is a string starting with "12'" followed by a 4-digit number (e.g., "d602", "d603", ..., "d639"). The second part is an assignment statement: "toneR = `c;". There are also three "[c]" entries and one "[end]" entry.

```
12'd602: toneR = `c;    12'd603: toneR = `c;
12'd604: toneR = `c;    12'd605: toneR = `c;
12'd606: toneR = `c;    12'd607: toneR = `c;
[c]
12'd608: toneR = `c;    12'd609: toneR = `c;
12'd610: toneR = `c;    12'd611: toneR = `c;
12'd612: toneR = `c;    12'd613: toneR = `c;
12'd614: toneR = `c;    12'd615: toneR = `c;
[c]
12'd616: toneR = `c;    12'd617: toneR = `c;
12'd618: toneR = `c;    12'd619: toneR = `c;
12'd620: toneR = `c;    12'd621: toneR = `c;
12'd622: toneR = `c;    12'd623: toneR = `c;
[c]
12'd624: toneR = `c;    12'd625: toneR = `c;
12'd626: toneR = `c;    12'd627: toneR = `c;
12'd628: toneR = `c;    12'd629: toneR = `c;
12'd630: toneR = `c;    12'd631: toneR = `c;
[c]
12'd632: toneR = `c;    12'd633: toneR = `c;
12'd634: toneR = `c;    12'd635: toneR = `c;
12'd636: toneR = `c;    12'd637: toneR = `c;
12'd638: toneR = `c;    12'd639: toneR = `c;
[end]
```
